Fencing

25X1A9a

Dear Mr. [REDACTED]:

25X1A9a

Pursuant to your letter of 16 September 1953 and previous related correspondence, it has been determined that the specifications for reference work can best be modified in the field to adapt them to the mutual requirements of the Government and the Lessee of the land. Aside from the few remarks which follow, it is believed that you and Mr. [REDACTED] are in possession of all the information necessary to proceed with finalization of the required specifications. If you desire, you may forward to this Office a marked copy of the latest print for any necessary drafting work.

25X1A
25X1A

With respect to any insulation which may be required in the [REDACTED], the norm is that any fence within 200 feet of an [REDACTED]. Each strand of barbed wire fencing on wood posts must be interrupted on maximum centers of 30'-0".

25X1A

Should it appear feasible to move (or remove) the fence from the old [REDACTED] property line, this Office concurs in the proposal to replace the gap on the building site in a way to match the other new fencing. Proposal to omit the barbed wire enclosure is not considered feasible. The lease of the grazing land does not include the area within that fence, as it was considered highly desirable to retain a small area around the building for purposes of providing some privacy.

Very truly yours,

25X1A9a
